

1 Spermatogenesis

Spermatogenesis is the process through which sperm are made. The *seminiferous tubules* are located in the testes, and are where *meiosis* occurs. *Spermatozoa*, also known as sperm, are created here, before maturing in the epididymis.

1.1 Hormones in Sperm Production

The same hormones that are involved in the menstrual cycle in females are involved in sperm production. Namely, FSH and LH. Testosterone is secreted by the testis.
